//保存
$scope.save = function (status) {//状态作为入参
    var serviceObject;//服务层对象
    if ($scope.entity.sellerId != null) {//如果有ID，注意这里是sellerId
        $scope.entity.status = status;//增加状态设置
        serviceObject = sellerService.update($scope.entity); //修改
    } else {
        serviceObject = sellerService.add($scope.entity);//增加
    }
    serviceObject.success(
        function (response) {
            if (response.success) {
                //重新查询
                $scope.reloadList();//重新加载
            } else {
                alert(response.message);
            }
        }
    );
}
```
